Excerpts on:

The Nodites

P. 757

In an effort to increase their numbers, Daligastia ordered immediate resort to sexual reproduction, knowing full well that the original sixty and their forty-four modified Andonite associates were doomed to suffer extinction by death, sooner or later. After the fall of Dalamatia the disloyal staff migrated to the north and the east. Their descendants were long known as the Nodites, and their dwelling place as "the land of Nod."

P. 758

The presence of these extraordinary supermen and superwomen, stranded by rebellion and presently mating with the sons and daughters of earth, easily gave origin to those traditional stories of the gods coming down to mate with mortals. And thus originated the thousand and one legends of a mythical nature, but founded on the facts of the postrebellion days, which later found a place in the folk tales and traditions of the various peoples whose ancestors had participated in these contacts with the Nodites and their descendants.

P. 758

The complete and radical reorganization of the whole world was attempted; revolution displaced evolution as the policy of cultural advancement and racial improvement

P. 756

The physical members of the Prince's staff had been constituted sex creatures for the purpose of participating in the plan of procreating offspring embodying the combined qualities of their special order united with those of the selected stock of the Andon tribes, and all of this was in anticipation of the subsequent appearance of Adam. The Life Carriers had planned a new type of mortal embracing the union of the conjoint offspring of the Prince's staff with the first-generation offspring of Adam and Eve. They had thus projected a plan envisioning a new order of planetary creatures whom they hoped would become the teacher-rulers of human society. Such beings were designed for social sovereignty, not civil sovereignty. But since this project almost completely miscarried, we shall never know what an aristocracy of benign leadership and matchless culture Urantia was thus deprived of.

P. 857

These mutant traits appearing in the first Nodite generation resulted from certain changes which had been wrought in the configuration and in the chemical constituents of the inheritance factors of the Andonic germ plasm. These changes were caused by the presence in the bodies of the staff members of the powerful life-maintenance circuits of the Satania system. These life circuits caused the chromosomes of the specialized Urantia pattern to reorganize more after the patterns of the standardized Satania specialization of the ordained Nebadon life manifestation. The technique of this germ plasm metamorphosis by the action of the system life currents is not unlike those procedures whereby Urantia scientists modify the germ plasm of plants and animals by the use of X rays.

P. 858

Bablot planned that the new buildings should become the nucleus of the future center of the Nodite culture and

civilization. His counsel finally prevailed, and construction was started in accordance with his plans. The new city was to be named Bablot after the architect and builder of the tower. This location later became known as Bablod and eventually as Babel.

Accordingly a council of the tribes was called, and after much deliberation the plan of Bablot, a descendant of Nod, was indorsed.

P. 858

Bablot proposed to erect a pretentious temple of racial glorification at the center of their then occupied territory. This temple was to have a tower the like of which the world had never seen. It was to be a monumental memorial to their passing greatness. There were many who wished to have this monument erected in Dilmun, but others contended that such a great structure should be placed a safe distance from the dangers of the sea, remembering the traditions of the engulfment of their first capital, Dalamatia.

P. 858

Bablot planned that the new buildings should become the nucleus of the future center of the Nodite culture and civilization. His counsel finally prevailed, and construction was started in accordance with his plans. The new city was to be named Bablot after the architect and builder of the tower. This location later became known as Bablod and eventually as Babel.

P. 859

About twelve thousand years ago a second attempt to erect the tower of Babel was made. The mixed races of the Andites (Nodites and Adamites) undertook to raise a new temple on the ruins of the first structure, but there was not sufficient support for the enterprise; it fell of its own pretentious weight. This region was long known as the land of Babel.

1. The western or Syrian Nodites. The remnants of the nationalistic or racial memorialists journeyed northward, uniting with the Andonites to found the later Nodite centers to the northwest of Mesopotamia. This was the largest group of the dispersing Nodites, and they contributed much to the later appearing Assyrian stock.

P. 860

3. The central or pre-Sumerian Nodites. A small group at the mouth of the Tigris and Euphrates rivers maintained more of their racial integrity. They persisted for thousands of years and eventually furnished the Nodite ancestry which blended with the Adamites to found the Sumerian peoples of historic times.

P. 860

And all this explains how the Sumerians appeared so suddenly and mysteriously on the stage of action in Mesopotamia. Investigators will never be able to trace out and follow these tribes back to the beginning of the Sumerians, who had their origin two hundred thousand years ago after the submergence of Dalamatia. Without a trace of origin elsewhere in the world, these ancient tribes suddenly loom upon the horizon of civilization with a full-grown and superior culture, embracing temples, metalwork, agriculture, animals, pottery, weaving, commercial law, civil

codes, religious ceremonial, and an old system of writing. At the beginning of the historical era they had long since lost the alphabet of Dalamatia, having adopted the peculiar writing system originating in Dilmun. The Sumerian language, though virtually lost to the world, was not Semitic; it had much in common with the so-called Aryan tongues.

P. 861

A company of twenty-seven followed Adamson northward in quest of these people of his childhood fantasies. In a little over three years Adamson's party actually found the object of their adventure, and among these people he discovered a wonderful and beautiful woman, twenty years old, who claimed to be the last pure-line descendant of the Prince's staff. This woman, Ratta, said that her ancestors were all descendants of two of the fallen staff of the Prince. She was the last of her race, having no living brothers or sisters.

P. 862

This center of civilization was situated in the region east of the southern end of the Caspian Sea, near the Kopet Dagh. A short way up in the foothills of Turkestan are the vestiges of what was onetime the Adamsonite headquarters of the violet race. In these highland sites, situated in a narrow and ancient fertile belt lying in the lower foothills of the Kopet range, there successively arose at various periods four diverse cultures respectively fostered by four different groups of Adamson's descendants. It was the second of these groups which migrated westward to Greece and the islands of the Mediterranean. The residue of Adamson's descendants migrated north and west to enter Europe with the blended stock of the last Andite wave coming out of Mesopotamia, and they were also numbered among the Andite-Aryan invaders of India.

P. 875

When the last Andite dispersion broke the biologic backbone of Mesopotamian civilization, a small minority of this superior race remained in their homeland near the mouths of the rivers. These were the Sumerians, and by 6000 B.C. they had become largely Andite in extraction, though their culture was more exclusively Nodite in character, and they clung to the ancient traditions of Dalamatia. Nonetheless, these Sumerians of the coastal regions were the last of the Andites in Mesopotamia.

P. 876

After the breakup of the early Sumerian confederation the later city-states were ruled by the apostate descendants of the Sethite priests. Only when these priests made conquests of the neighboring cities did they call themselves kings.

P. 877

About 2500 B.C. the Sumerians suffered severe reverses at the hands of the northern Suites and Guites. Lagash, the Sumerian capital built on flood mounds, fell. Erech held out for thirty years after the fall of Akkad. By the time of the establishment of the rule of Hammurabi the Sumerians had become absorbed into the ranks of the northern Semites, and the Mesopotamian Andites passed from the pages of history.

P. 875

8. THE SUMERIANS--LAST OF THE ANDITES

When the last Andite dispersion broke the biologic backbone of Mesopotamian civilization, a small minority of this superior race remained in their homeland near the mouths of the rivers. These were the Sumerians, and by 6000 B.C. they had become largely Andite in extraction, though their culture was more exclusively Nodite in character, and they clung to the ancient traditions of Dalamatia. Nonetheless, these Sumerians of the coastal regions were the last of the Andites in Mesopotamia. After the breakup of the early Sumerian confederation the later city-states were ruled by the apostate descendants of the Sethite priests. Only when these priests made conquests of the neighboring cities did they call themselves kings. The later city kings failed to form powerful confederations before the days of Sargon because of deity jealousy. Each city believed its municipal god to be superior to all other gods, and therefore they refused to subordinate themselves to a common leader.

The end of this long period of the weak rule of the city priests was terminated by Sargon, the priest of Kish, who proclaimed himself king and started out on the conquest of the whole of Mesopotamia and adjoining lands. And for the time, this ended the city-states, priest-ruled and priest-ridden, each city having its own municipal god and its own ceremonial practices. By the time of the establishment of the rule of Hammurabi the Sumerians had become absorbed into the ranks of the northern Semites, and the Mesopotamian Andites passed from the pages of history.

P. 860

The Sumerians well knew of the first and second Edens but, despite extensive intermarriage with the Adamites, continued to regard the garden dwellers to the north as an alien race. Sumerian pride in the more ancient Nodite culture led them to ignore these later vistas of glory in favor of the grandeur and paradisiacal traditions of the city of Dilmun.

P. 848

Now, in those days it was customary to make offerings to the priesthood of the things at hand. Herders would bring of their flocks, farmers of the fruits of the fields; and in accordance with this custom, Cain and Abel likewise made periodic offerings to the priests. The two boys had many times argued about the relative merits of their vocations, and Abel was not slow to note that preference was shown for his animal sacrifices. In vain did Cain appeal to the traditions of the first Eden, to the former preference for the fruits of the fields. But this Abel would not allow, and he taunted his older brother in his discomfiture. In the days of the first Eden Adam had indeed sought to discourage the offering of animal sacrifice so that Cain had a justifiable precedent for his contentions. It was, however, difficult to organize the religious life of the second Eden. Adam was burdened with a thousand and one details associated with the work of building, defense, and agriculture. Being much depressed spiritually, he intrusted the organization of worship and education to those of Nodite extraction who had served in these capacities in the first garden; and in even so short a time the officiating Nodite priests were reverting to the standards and rulings of pre-Adamic times.

P. 992

The Greeks were the first to evolve truly rational methods of treating the sick. Both the Greeks and the Egyptians received their medical knowledge from the Euphrates valley. Oil and wine was a very early medicine for treating wounds; castor oil and opium were used by the Sumerians. Many of these ancient and effective secret remedies lost their power when they became known; secrecy has always been essential to the successful practice of fraud and superstition.

P. 990

The Chinese and Mesopotamians long regarded disease as the result of the action of evil demons, although the Chaldeans also looked upon the stars as the cause of suffering. The ancient Greeks, having preserved the traditions of Adamson's teachings, were among the first to recognize that all disease is the result of natural causes.

P. 744

In skin color and language these materialized members of Caligastia's staff followed the Andonic race.
